Tribe 29 is one of the most famous companies in the world of software, and this is because it is the company that develops Check mk an all-in-one IT monitoring software, which is available in two versions, an open source version that is aimed at the general community and a commercial one which is oriented for companies. In this brief review we will talk about Check mk and give you our opinion about this software.

Check mk

Check mk main features

Choosing Check mk can be an excellent decision if you understand the potential that this tool offers, 5 of its main features are the following:

- Allows you to save time by automating the monitoring process.
- Allows you to add new components with less effort through automatic detection and configuration, in other words (no need to tell Check mk that the firewall is a firewall, it will recognize it on its own), then it will monitor all relevant components along with their metrics and thresholds.
- It allows automating the monitoring of dynamic ephemeral infrastructure. This is a great advantage, since containers, pods, virtual machines can be added and removed from monitoring automatically.
- Modern rule-based 1 to N configuration can be used, which means that it remains intuitive even in more complex environments, as well as representing less configuration effort than other monitoring solutions.
- It can integrate with other systems, using powerful APIS that allow you to automate almost anything imaginable.

Our opinion about Check mk

Undoubtedly Check mk is one of the best tools that we can use today for monitoring applications, servers and networks, we do not say so ourselves, say the more than 2000 satisfied customers around the world who have used the tool and testify to it. For this reason, we think that Check mk is an essential tool to carry out a successful monitoring of the resources mentioned above. However, we are aware of the variety of tools that the market offers for this function, but we bet on the experience and reputation that Check mk has built during all these years.
